Form for reporting a compensable injury

PART I. SUMMARY OF THE STATISTICSComment by Mr T.J. Skinner, Deputy Commonwealth StatisticianINTRODUCTION

The detailed statistical tables relating to workers' compensation in the year ended 30 June 1984, as shown in Part II of this bulletin, have been compiled by the Australian Bureau of Statistics. They are derived from returns which insurers (including self-insurers) have supplied to the State Compensation Board in respect of injuries for which claims have been submitted. Injuries compensable under the Workers' Compensation Act comprise :-

- (a) Injuries arising out of or in the course of a worker's employment whether received at or away from his place of employment;
- (b) diseases which are contracted or aggravated in the course of a worker's employment and to which the employment was a contributing factor;
- (c) Injuries received by a worker on the journey between his residence and place of employment or on other prescribed journeys; and
- (d) Injuries sustained by a worker whilst temporarily absent from his place of employment during an ordinary recess period.

Although the statistics provide a satisfactory record of cases (excluding cases of less than three days' incapacity) under the Workers' Compensation Act, they do not provide a complete record of all industrial accidents to workers in New South Wales. They exclude the following :-

- (a) Injuries which did not result in incapacity for work for at least three days. Although such injuries have been compensable under the Act since 20 December 1948, it has been practicable to obtain for publication only limited statistics relating to number of cases and payments of compensation.
- (b) Injuries for which no claim was made under the Act.
- (c) Injuries sustained by workers to whom the provisions of the Workers' Compensation Act do not apply. Such workers include most self-employed persons, employees of the Australian Government, and certain groups of employees specifically excluded from the Act (e.g. the police, and casual workers employed for one period only of not more than five working days and who are employed other than for the purpose of the employer's trade or business).
- (d) Cases of disease caused by the inhalation of dust (except in coal mining), as provision for compensation in these cases is made under other Acts.

In Part I, the statistics are reviewed in three sections. Section A surveys the number of new cases of compensable injury reported; Section B gives particulars of the duration of weekly payments and average amount of compensation per case in respect of cases terminated; and Section C shows the amount of compensation paid. As the compensation paid in a particular year includes payments in respect of cases first reported in earlier years and excludes payments yet to be made on claims not finalised by the end of the year, the compensation payments during a year cannot be related to the compensation cases reported in that year.

Where figures shown in this bulletin have been rounded, discrepancies may occur between sums of the component items and the totals shown.

SECTION A. NEW CASES OF COMPENSABLE INJURY REPORTED

The returns received for tabulation each year comprise all compensation cases for which payments were made in the year and unfinalised cases for which no payments were made in the year. In many cases payments begin and end in the one year, but in a number of cases payments overlap from one year to another and in some instances continue for a number of years. New cases in any year are defined as those cases for which a return has been supplied for the first time to the State Compensation Board in that year. While such cases can be distinguished from those carried forward from the previous year, a minor degree of subjective judgement is necessary in deciding whether an unfinalised case (particularly if no payment has been made by the end of the year) will ultimately prove to be compensable or will involve at least three days of incapacity.

New cases are classified according to the result of the accident as known by the Insurer at the time of completing the return in respect of that accident. Fatal cases, for example, include cases where an employee has subsequently died as a result of injuries received at work, as well as cases where an employee is killed at work. Compensation cases are ascribed to "injury by disease" where :-

- (a) the ascribed cause of the "injury" is slow and protracted in nature; and/or
- (b) the "injury" is ascribed to the repeated or continuous action of a mechanical, physical, or chemical cause i.e. it is not due to a single event, but to a cause, acting imperceptibly and constantly; and/or
- (c) the person "injured" probably had some degree of pre-disposition to the development of the pathological conditions causing the injury.

The classification used for tabulating injuries and the causes of these injuries are based on those recommended for adoption by the Tenth International Conference of Labour Statisticians. Injuries by accident are classified according to cause, nature (e.g. fracture, dislocation, etc.), and (bodily) location (e.g. eye, nose, etc.) of the injury. Causes of injury are classified according to :-

- (a) the type of accident (defined as the type of event which directly resulted in the injury, i.e. the manner in which the object or substance causing the injury enters into contact with the injured person); and
- (b) the agency causing the accident (defined as the machine, means of transport, equipment, substance, working environment, etc. which, because of its hazardous nature or condition, precipitated the event).

The year in which a new case is recorded may be later than the year in which the compensable injury occurred. Care should therefore be exercised when interpreting changes in the statistics from year to year. Although, in general, such changes will reflect actual differences in the number of compensable injuries occurring in those years (which may vary simply in terms of the number of workers exposed to risk), they may also be a result of:-

- (a) variations in the (average) time period between occurrence and notification of injuries to the State Compensation Board; and
- (b) the revision of the classifications, in 1982-83, for the type of accident, the agency causing the accident, and the nature and location of the injury. Further details on these revisions are available in the 1982-83 bulletin.

Particulars of new compensation cases reported during the years ended 30 June 1979 to 1984 are shown in the following table :-

(a) See page 5 (paragraph 4) for a cautionary note on comparisons of statistics for different years.
 (b) See page 5 (paragraphs 2 and 3) for a note on the definitions used. (c) As prescribed in Section 7(1), paragraphs (c) and (d) of the Workers' Compensation Act. (d) Includes cases arising out of a worker's employment, and injuries sustained by a worker whilst temporarily absent from his place of employment during an ordinary recess period.

Amongst males, 81 per cent of the new cases reported in 1983-84 involved injuries by accidents in the course of employment etc., 7 per cent involved injuries received on periodic or other prescribed journeys, and 12 per cent were attributed to disease. For females, the corresponding proportions were 66, 16 and 18 per cent - reflecting the smaller proportion of females employed in the more hazardous occupations.

The new compensation cases covered in Table 1 included the following fatal cases :-

INJURIES ON PERIODIC OR OTHER PRESCRIBED JOURNEYS

Only a small proportion of the new compensation cases reported in a year involve injuries received on the journey to or from employment, or on the other journeys prescribed in Section 7(1), paragraphs (c) and (d) of the Workers' Compensation Act. The agency of accident for new compensation cases involving injuries received on periodic or other prescribed journeys is shown in Table 3 on page 8.

(a) As prescribed in Section 7(1), paragraphs (c) and (d) of the Workers' Compensation Act. (b) See page 5 (paragraph 3) for a note on the classification used.

In 1983-84, means of transport was the agency of accident in respect of 69 per cent of the new cases of injuries to male workers on prescribed journeys (motor vehicles, 65 per cent; rail transport, 1 per cent; and other means of transport, 3 per cent), while traffic surfaces was the agency in respect of 25 per cent of the cases. For females, the proportions were: means of transport, 58 per cent (including motor vehicles, 56 per cent); and traffic surfaces, 36 per cent. There were 55 fatal cases among male workers and 7 fatal cases among female workers in 1983-84.

INJURIES IN VARIOUS INDUSTRIES

The "classification of employment" shown in Table 4 on page 9 (and used elsewhere in this bulletin) is prescribed by Regulations which were adopted under the Workers' Compensation Act. This classification is not directly comparable with any classification adopted for the compilation of official statistics regarding industries or occupations of employees.

Cases of disease caused by the inhalation of dust (except in coal mining) are excluded. Provision for compensation in these cases is made under special legislation, and they are not taken into consideration in reviewing operations under the principal Workers' Compensation Act.

In the transport group, cases relating to employees in government transport services are included if compensation is claimed under the Workers' Compensation Act. Injuries compensated in terms of the Government Railways or Transport Acts are excluded.

(a) As prescribed by regulations under the Workers' Compensation Act.

New cases of compensation for males reported in 1983-84 were most numerous in metals and machinery manufacturing, etc. (20,312), followed by construction, maintenance, etc. (13,387), mining, etc. (9,117), wholesale, retail, etc. (8,936), food and drink manufacturing (6,300), transport (5,888), building (4,320), and professional (including clerical and administrative) (4,241); these classes accounted for 80 per cent of all new cases reported for males.

Amongst females, new compensation cases were most numerous in professional (including clerical and administrative) (5,230), followed by personal service (4,673), wholesale, retail, etc. (3,031), food and drink manufacturing (1,595), metals and machinery manufacturing, etc. (1,539), domestic and home services (1,236), clothing, etc. manufacturing (1,064), and miscellaneous manufacturing (603); these classes accounted for 89 per cent of all new cases reported for females.

AGES OF INJURED MALE WORKERS

The age distribution of males involved in new compensation cases reported in each of the last six years is given in the following table :-

(a) See page 5 (paragraph 4) for a cautionary note on comparisons of statistics for different years.

(b) Excluding those with age not stated.

Tables V and VI of Part II show, for 1983-84, the age distribution of males and females grouped according to classification of employment and agency of accident respectively.

In 1983-84, cases involving males and females under 40 years of age accounted for 61 and 60 per cent respectively of all new compensation cases (excluding those cases where the age was "not stated").

For males, these new compensation cases were most numerous in the metals and machinery manufacturing, etc. class of employment. The age distribution of males in this class (excluding those cases where the age was "not stated") in 1983-84 was : under 20 years, 9.5 per cent; 20 to 24 years, 17.4 per cent; 25 to 29 years, 12.0 per cent; 30 to 34 years, 10.5 per cent; 35 to 39 years, 9.8 per cent; 40 to 44 years, 9.1 per cent; 45 to 49 years, 8.7 per cent; and 50 years and over, 22.9 per cent.

For females, these new compensation cases were most numerous in the professional (including clerical and administrative) class of employment. The age distribution of females in this class (excluding those cases where the age was "not stated") in 1983-84 was : under 20 years, 6.6 per cent; 20 to 24 years, 15.9 per cent; 25 to 29 years, 12.1 per cent; 30 to 34 years, 10.5 per cent; 35 to 39 years, 11.1 per cent; 40 to 44 years, 11.0 per cent; 45 to 49 years, 11.0 per cent; and 50 years and over, 21.8 per cent.

AGENCY OF ACCIDENT

The new accident compensation cases reported in 1983-84 are classified by the major groupings of agency of accident in the next table :-

(a) See page 5 (paragraph 3) for a note on the classification used.

Further particulars of agency of accident are given in Tables IV, VI, VII, IX, and X of Part II. In these tables, the major groupings of agency of accident shown above are classified by type of machine, means of transport, etc.

TYPE OF ACCIDENT

The new accident compensation cases reported in 1983-84 are classified by type of accident in the next table :-

(a) See page 5 (paragraph 3) for a note on the classification used. (b) Includes trips and stumbles.

In Table X of Part II, the new accident compensation cases reported in 1983-84 are classified by type of accident and agency of accident. The principal types of accident to male workers in 1983-84 were : over-exertion, strenuous, etc. movements, 20,441 cases (26.01 per cent); stepping on, striking against, or struck by objects, 20,375 cases (25.93 per cent); and falls of and jumps by persons, 19,249 cases (24.50 per cent). In accidents of the type over-exertion, strenuous, etc. movements, the principal agencies of accidents were: 'other materials, substances and radiations', 5,821 cases (28.48 per cent); crates and other containers, 4,511 cases (22.07 per cent); and other equipment, not elsewhere classified, 2,236 cases (10.94 per cent). Accidents of the type stepping on, striking against, or struck by objects were precipitated by 'other tools and implements' in 3,962 cases (19.45 per cent); "other materials, substances, and radiations" in 3,955 cases (19.41 per cent); and trucks and other motor vehicles in 1,443 cases (7.08 per cent). Where the worker fell or jumped, the agency of accident was traffic and other working surfaces outdoors in 6,111 cases (31.75 per cent); and indoor working surfaces, 5,808 cases (30.17 per cent).

The principal types of accident to female workers in 1983-84 were : falls of and jumps by persons, 5,436 cases (30.87 per cent); over-exertion, strenuous, etc. movements, 5,165 cases (29.33 per cent); and stepping on, striking against, or struck by objects 3,034 cases (17.23 per cent).

NATURE AND LOCATION OF INJURIES (ACCIDENT CASES)

The nature and location of the injuries by accident sustained by male and female workers involved in new compensation cases reported in 1983-84 are summarised in Table 9 on page 14 and Table 10 on page 15 respectively. Where more than one injury is sustained in an accident, the case is classified to the most severe injury. In reporting the nature of injury, particularly in cases where amputation or enucleation results, the result as known at the time of completing the return in respect of the accident may be reported, instead of the nature of the original injury. For example, where an employee's leg is crushed in an accident and subsequently amputated, the nature of injury may be reported as amputation of leg instead of crushed leg. This should be borne in mind in interpreting the figures. Most injuries to male workers are in the nature of sprains and strains. In 1983-84, these represented 46 per cent of total injuries caused by accident, while lacerations and open wounds represented 16 per cent, contusions and crushings represented 15 per cent, and fractures represented 9 per cent. Injuries to upper limbs were more numerous than injuries to other parts of the body; they numbered 25,136 and included 8,878 cases of lacerations and open wounds, 6,225 cases of sprains and strains, 4,161 cases of contusions and crushings, and 3,400 cases of fractures. Amputations and enucleations numbered 256, most of which (240) involved the loss of part(s) of an upper limb; there were 16 cases where part(s) of a lower limb were lost. Cases of concussion and internal injury of the brain numbered 377; fracture of the skull, 79; fracture of the nose, 97; and superficial injury to the eye (mainly due to foreign bodies entering the eye), 1,740. Injuries to the trunk included strained back, 16,426; fracture of chest or ribs, 589; and hernia, 1,006.

Most injuries to female workers are also in the nature of sprains and strains. In 1983-84, these represented 55 per cent of total injuries by accident, while contusions and crushings represented 14 per cent, lacerations and open wounds represented 10 per cent, and fractures represented 9 per cent. Injuries to upper limbs were more numerous than injuries to other parts of the body; they numbered 5,140 and included 2,030 cases of sprains and strains, 1,219 cases of lacerations and open wounds, 717 cases of fractures, and 647 cases of contusions and crushings. Amputations numbered 30, 29 of which involved the loss of part(s) of an upper limb and in one case, a lower limb was lost. Cases of concussion and internal injury of the brain numbered 189; fracture of the skull, 16; fracture of the nose, 29; and superficial injury to the eye (mainly due to foreign bodies entering the eye), 75. Injuries to the trunk included strained back, 3,874; fracture of chest or ribs, 125; and hernia, 35.

INJURIES BY DISEASE

Compensable cases of injuries by disease are classified according to the Ninth Revision of the International Statistical Classification of Diseases, Injuries, and Causes of Death.

The new compensable disease cases reported in 1983-84 are classified by the nature of the disease in Table 11 on page 16.

Table XI of Part II shows new compensable disease cases in 1983-84 classified according to the nature of disease and classification of employment. Amongst males, the diseases to which the greatest number of "injury by disease" cases were assigned were industrial deafness, 8,139 cases (70.07 per cent), and other diseases of the musculoskeletal system and connective tissue, 986 cases (8.49 per cent). Forty-three per cent of the cases of industrial deafness occurred in the metals, machinery manufacturing, etc. class of employment and 33 per cent of the cases of other diseases of the musculoskeletal system and connective tissue occurred in the same class of employment. Amongst females, the diseases to which the greatest number of "injury by disease" cases were assigned were synovitis, bursitis and tenosynovitis, 1,782 cases (46.83 per cent), and other diseases of the musculoskeletal system and connective tissue, 1,107 cases (29.09 per cent). Thirty-two per cent of the cases of synovitis, bursitis and tenosynovitis occurred in the professional (including clerical and administrative) class of employment and 20 per cent of the cases of other diseases of the musculoskeletal system and connective tissue occurred in the metals, machinery manufacturing, etc. class of employment.

SECTION B. COMPENSABLE INJURY CASES TERMINATED

DURATION OF COMPENSATION

Particulars of the duration of compensation in cases compensated by weekly payments, and in respect of which no lump sum payments were made, are given in the next table. These particulars relate to cases terminated during 1983-84 and not (as in preceding tables) to new cases reported in the year. For cases terminated in 1983-84, the average duration was 4.8 weeks for males and 5.6 weeks for females.

In respect of males, the duration of weekly payments was less than two weeks in 56.7 per cent of the weekly payment cases terminated in 1983-84 and less than eight weeks in 89.0 per cent of such cases. For females, the proportions were 55.1 per cent and 86.9 per cent, respectively.

Table 13 on page 18 shows, for cases compensated by weekly payments, the average duration of cases terminated in 1983-84 in each class of employment. The average duration for male workers was greatest (6.3 weeks) in clothing, textiles, upholstery manufacturing, and least (3.1 weeks) in leather manufacturing. The average duration for female workers was greatest (12.77 weeks) in transport (air, land, water), and least (3.13 weeks) in construction, maintenance, etc.

AVERAGE AMOUNT OF COMPENSATION

Particulars of the average amount of compensation per case in respect of all compensation cases terminated during 1983-84 are given in Table 14 on page 19. These particulars cover all payments (irrespective of the year of payment) in respect of cases which involved the death of an employee or the incapacity of an employee for three or more days.

TABLE 14. COMPENSATION CASES TERMINATED IN 1983-84 : AVERAGE AMOUNT OF COMPENSATION PER CASE

(a) Includes medical, hospital, and ambulance expenses, and damage to clothing, etc.

SECTION C. AMOUNT OF COMPENSATION PAID

The total amount of compensation paid under the Workers' Compensation Act in each of the last six years is shown in Table 15 on page 20. The compensation paid in a particular year includes payments in respect of some cases first reported in earlier years and excludes payments yet to be made on claims not finalised by the end of the year. Accordingly, the compensation payments during a year cannot be related to the new compensation cases reported in that year. Amounts shown on page 20 are gross payments i.e. payments recovered by insurers during the year (e.g. as a result of damages awarded to a worker under motor vehicle third-party insurance) have not been deducted. Payments recovered by insurers during 1983-84 totalled \$20,643,413.

Self-insurers paid \$67,834,505 (12 per cent of the total compensation payments in 1983-84), and licensed insurers paid \$513,022,758 (88 per cent).

Particulars of the compensation paid during 1983-84 in cases where the injury sustained resulted in death or incapacity for three or more days are given in Table 16 on page 20.
